

Just cut down on the flying, that's all we ask

Climate change already kills over 160,000 people a year. In Africa, 185 million people will die of diseases directly attributable to climate change. Drought will leave hundreds of millions without food. You may have turned down your thermostat, but did you know aviation is the UK's fastest growing source of greenhouse gas emissions? One person's emissions for a return flight from London to Dublin are the same as leaving your kettle to boil continuously for 6 days... New York is 75 days... Sydney is 272 days.

Flights taken by UK citizens already create the equivalent of almost 20% (twenty) of the UK's climate damage.

The UK Government wants passenger numbers to double by 2030 and treble by 2050, destroying all other efforts to reduce emissions.

Fly less. Take trains when you can. Use video conferencing.
