

An unaccountable and expensive new Planning Commission will **remove your rights** to influence the biggest planning decisions.

The planning system should protect **irreplaceable ancient woodland**, not strip away environmental protection.

Ministers, not an unelected commission, should take responsibility for major infrastructure.

We must **tackle climate change and reduce emissions** from major projects by putting climate at the heart of decision making in the Planning Bill.

Goodbye Planning

We must build space for wildlife into major developments and **join up our fragmented landscape** so that we can adapt to climate change.

It's not too late to plan a better future

Very soon you could be saying goodbye to your right to have a say about the future of your local environment. The Planning Bill currently going through Parliament enables the Government to push through roads, runways and nuclear power stations without you having a proper say. The Bill is undemocratic, reduces your rights and won't protect your environment. Despite huge public concern the Government has refused to address these issues.

While we all agree that new energy and transport infrastructure is vital to our nation it must be designed to deliver a low carbon economy which respects and enhances our environment. Help us put people and the environment at the heart of planning.

It's not too late to plan a better future. Act now and write to Hazel Blears, Secretary of State, and ask her to ensure your rights, the environment and democracy are protected. Email her through www.planningdisaster.co.uk or write to her at DCLG, Eland House, Bressenden Place, London, SW1E 5DU.
